Download from the site (should be listed on the instructions page) – CUSTOM is the file you want to download; if I didn't supply a direct link.

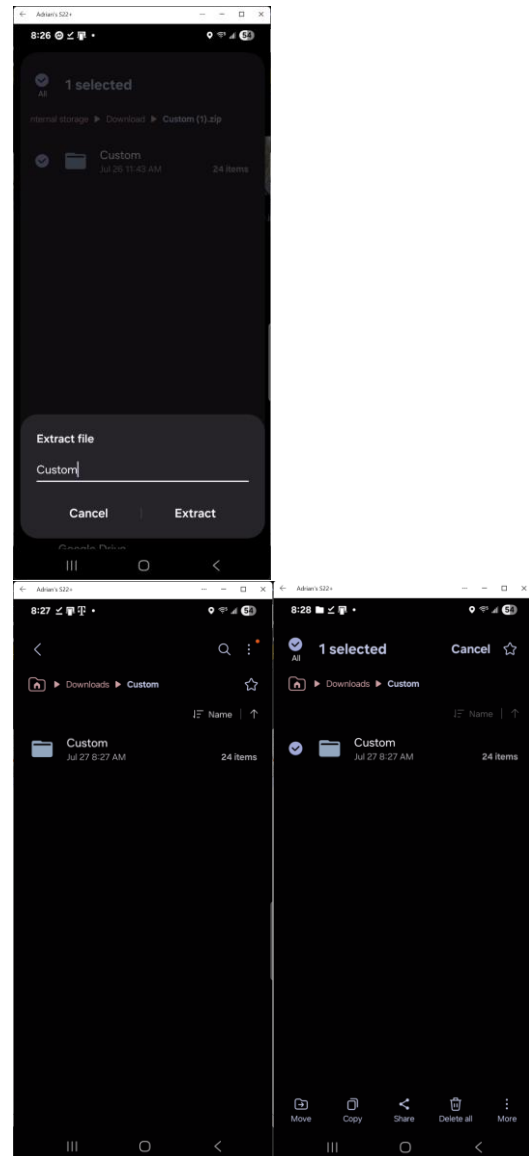

Go to your downloads folder and open your file – CUSTOM will be the file you are looking for

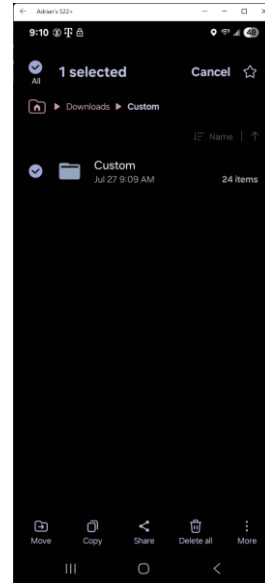

Highlight the Custom folder, and choose EXTRACT.
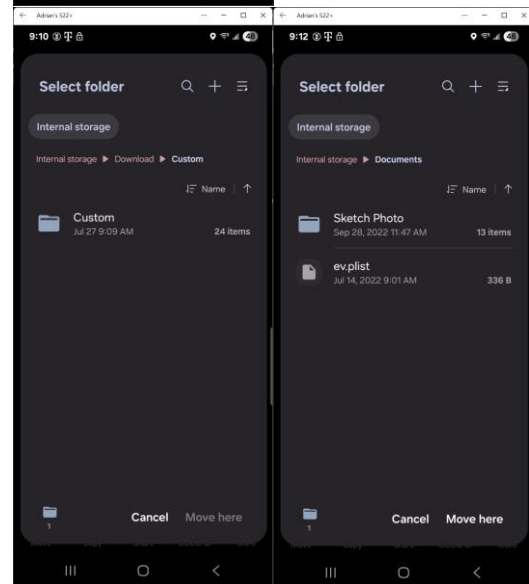

Leave it that name

Select (press and hold) the Custom folder you see. Then do 'move'

Go ahead and select MOVE.

Select, Internal storage, at the top, Choose Documents, select Move Here at the bottom.

After selecting Show In Folder, you should see the Custom folder, go into that.
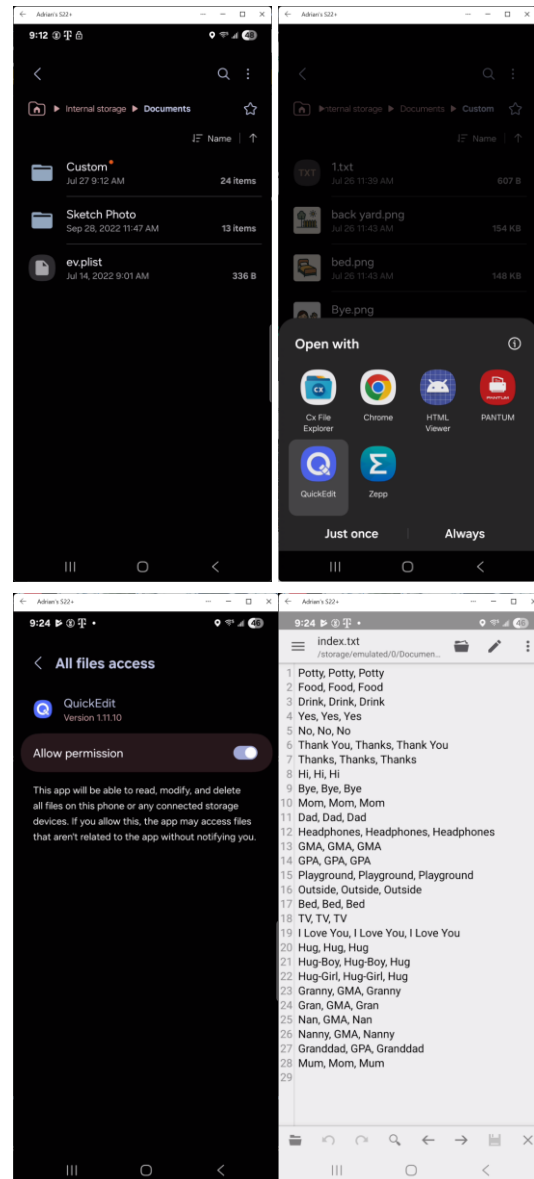

This is your sample pack:

1.txt = a backup and template for Index.txt
index.txt = what the CUSTOM tool will load from.
The images, sample images.

If you don't have a TEXT editor on your phone, you can download/use:
https://play.google.com/store/apps/details?id=com.rhmsoft.edit&hl=en_US (it has ads, but it'll do!)

You will probably be asked for permissions settings for QuickEdit, you'll have to grant it.

Hit the back arrow.

There are 3 fields:
1: Display Name
2: Image
3: mp3 file
So if you wanted to add a quick button at the very top (beginning of the CUSTOM screen), you add it to the top of the file… it runs them in order.

YOU WILL NEED TO UPLOAD YOUR IMAGE, AND MP3 FILES TO THIS LOCATION \INTERNAL STORAGE\DOCUMENTS\CUSTOM\
Image's do not need to be larger than 512*512

Once inside the game, if you need to set permissions, you should see a RED BOX you can click **SET** on.

Once the permissions are set so the tool can read your Documents path, you'll see that Custom tool populate when selected from the game menu.
